

Economic mechanism of regulating land relations in the Agricultural Sector of Russia

Kazan Federal University, 420008, Kremlevskaya 18, Kazan, Russia

Abstract

© 2018 International Strategic Management Association. All rights reserved. The present study substantiates the economic basis for regulating land relations in the agricultural sector, outline the main stages of the formation and development of land relations in Russia. It also carries out a comparative analysis of land relations in Russia and foreign countries, presents theoretical aspects of economic regulation of land relations in the agricultural sector and considers domestic and foreign experience of the regulation of land relations. The activities of human society in connection with land are carried out on the basis of social relations, the key element of which is land relations. Transformations and regulation of land relations occur in the process of agrarian transformations. Historically, it has been proven that the implementation of agrarian reforms that change the socioeconomic situation, the working conditions of people, the production and marketing of products, does not bring about solid results without a proper transformation of land relations. The unique role of land relations in the system of agrarian reforms suggests that agrarian restructuring must begin with land reform.

Keywords

Economic efficiency, Land relations, Land resource, State regulation
